DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,4,8-10 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamaguchi et al.

Yamaguchi et al. teaches a shaving apparatus comprising at least one shaving head, 54, including a shaving surface for contacting skin during shaving and at least one cutter, 51, that is moveable behind the shaving surface, (fig. 26), a drive structure including a motor, 3, coupled to the at least one cutter for driving the movement of the at least one cutter, electric power supply means, 9, connected to the motor, a housing, 8,12, containing the motor and at least part of the electric power supply means, (the part of the plug, 9, that is connected to the motor), and carrying the drive structure, (col. 3, lines 28-45), a detachable shell structure, 7, enveloping at least a circumference of the housing behind the at least one shaving head when mounted to he housing, a shaving head holder support, 155, carrying the shaving head holder to which the at least one shaving head is mounted, wherein the shell extends at least from a face against which the at least one shaving head holder support is mounted to a power plug socket, 9, at

an end of the housing opposite from the face against which the at least one shaving head holder support is mounted, wherein the shell structure fully envelops the housing at least between the face against which the at least one shaving head holder support is mounted and the power plug socket, (fig. 7). Yamaguchi also teaches that the shell structure includes shell portion spaced from the housing such that an interspace is left between the housing and the shell portions, (fig. 4), the housing including at least a first operating member, and the shell structure including at least a second operating member, S, mechanically and electrically connected with the first operating member, (col. 3, lines 25-27), and the shell structure consisting of two shell portions, having shapes different from each other, (the shell portion with the hole for the switch, S, is shaped differently than the other shell portion).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6,7,11 and 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaguchi et al. in view of Maraguchi et al.

Application/Control Number: 10/580,620

Page 4

Art Unit: 3723

Yamaguchi et al. teaches all the limitations of the claims except for at least a portion of the shell structure being of a more impact resistant material than the housing, a portion of the shell structure is of a softer material than the housing, an optical signaling member, and the shell structure including a window via which optical signals generated by the optical signaling member are visible, an assortment of at least two shaving apparatus, and at least two shell structures. Maraguchi et al. teaches an optical signaling member, and the shell structure including a window via which optical signals generated by the optical signaling member are visible, (col. 4, lines 49-53, fig. 1). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the tool of Yamaguchi with an optical signaling member, as taught by Maraguchi, in order to enhance the functionality of the tool. It would have been further obvious to provide the tool with least a portion of the shell structure being of a more impact resistant material than the housing, a portion of the shell structure is of a softer material than the housing, as a matter of obvious design choice. It would have been further obvious to provide an assortment of two shaving apparatuses, since it is well known to manufacture multiple apparatuses. It would have been obvious to provide tow shell structures, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art.

Allowable Subject Matter

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1,4 and 6-15 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SHANTESE MCDONALD whose telephone number is (571)272-4486. The examiner can normally be reached on 8:00 a.m. - 4:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Hail can be reached on (571) 272-4485. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
